Liquidity and Capital Resources

Liquidity refers to the Company's ability to maintain a cash flow adequate to fund operations and capital investments on a timely and cost efficient basis. It is the objective of the Company to earn an above average rate of return primarily through long-term capital appreciation and dividend income. The investment portfolio will be invested principally in equities. From time to time, however, assets of the Company may be invested in interest bearing short-term securities pending the selection of suitable equity investments. The Company's income from operations after payment of taxable dividends is used to fund operating costs as well as provide resources for additional investments.

United Corporations Limited has always been a vehicle for long term growth through investment in common equities. Management believes that over long periods of time, common equities as an asset class will outperform fixed income instruments or balanced funds.

As the fund's investment philosophy is of a long-term nature, short-term volatility is expected and tolerated. We remain confident that our investment strategy will reward our shareholders over the long term.
